Linear Search program:-

```
#include <stdio.h>

int main()
{
    int a[100], n, Key, i;
    // Read number of elements
    printf("enter number of elements:");
    scanf("%d", &n);
    // Input array elements using for loop.
    printf("enter %d elements: \n", n);
    for (i=0; i<n; i++)
    {
        scanf("%d", &a[i]);
    }
    // input Search Element
    printf("enter element to search:");
    scanf("%d", &Key);
    // Linear search using while loop and if
    i=0;
    while (i<n)
    {
        // if (a[i] == Key)
        {
            printf("element found at position %d", i+1);
            return 0;
        }
        i++;
    }
    printf("element not found");
}
```

return 0;

y

Input :-

Enter number of elements 5

Enter 5 elements :
10
20
30
40
50

Enter element to search : 20

Output :-

Element found at position 1
